

Installation

Free-Standing Electric Cookers

A complete installation service that gives you peace of mind when buying your new appliance. We will install and test your electric cooker to ensure that it is performing at its optimum levels and finally we will demonstrate the basic functions.

Our Service

- Connect existing wiring to new appliance
- Our installer will fit the appliance into the designated space and level it
- We will test the appliance and demonstrate its functions

What you need to check

- To ensure that all existing wiring is safe and suitable to accept your new appliance
- To ensure that your household circuit is rated to accept your new appliance
- That there is sufficient space for the appliance (width, depth and height)
- Ensure there is an accessible double-pole control rated between 30 and 45 amps within 2m of the designated space
- There must be a minimum level of clearance between the top of the cooker and the bottom of the upper cupboards (British Standard is 760mm but some appliances vary. Please check manufacturers instructions)
